

CheckMate SOS is an alert pendant that sends an immediate alarm in the event of an emergency.

If an employee falls, becomes suddenly ill, or otherwise needs immediate medical attention, help can be dispatched at the press of a button.

During an emergency it can be difficult to let others know that medical attention is required. **CheckMate SOS** sends an Emergency alarm and GPS location information to our the ProTELEC Emergency Monitoring Centre.

Emergency Button

Simply press and hold to directly connect with ProTELEC's Emergency Monitoring Centre. Hands-free two-way communications are enabled as soon as the device is activated.

Automatic Fall Detection

CheckMate SOS is designed to sense when a fall happens and will automatically generate an Emergency alarm and contact our Emergency Monitoring Centre.

Fall data is gathered from an array of sensors located in the device, including accelerometers, a magnetometer and gyroscope. Over 190 different parameters, such as orientation change, impact intensity and speed, are collected and analyzed to determine if a fall has occurred.

GPS Location Tracking - GPS location information is sent with every Emergency alarm. If GPS satellite information is not available, locations are approximated using geographic triangulation and cellular networks. **CheckMate SOS's** location services enable our Emergency Monitoring Centre to determine where an alarm has been activated, even if the person experiencing an emergency is not able to verbally confirm their location.

Hands Free Two-way Communication - Whether the Emergency button is pushed, or the sensor detects a fall, hands free two-way voice communication is initiated with our Emergency Monitoring Centre.

Works wherever there is Cellular Service - With **CheckMate SOS**, employees can be protected and quickly assisted in case of emergencies, even when they may be working alone in the field, or are stationed at remote job sites.

PROTELEC ALARMS IS AN INDUSTRY LEADER IN EMERGENCY MONITORING

Our Emergency Monitoring Centre operates around the clock and both our operators, and our facility, have met or exceeded the highest level of certification available in the industry.

Our Operators

All our operators must undergo rigorous training and education to qualify to work in ProTELEC's Emergency Monitoring Centre, certified 'Five Diamond' by the Central Station Alarm Association (CSAA), an organization whose mandate is to maintain the highest standards of excellence in the North American alarm industry.

Our Facility

Our Emergency Monitoring Centre is ULC-listed to confirm that it meets demanding requirements for architectural and physical security features, emergency power, computer hardware and software, as well as operator training.
